EMERGENCY WATER SHUTDOWN

Please be advised that we will be conducting an Emergency Water Shut Down today (as soon as crews arrive to site); in order to deal with an in-suite leak and inability to exercise the Units isolation valves.

Owners are reminded to exercise these isolation valves for your Unit (located typically above your washer/dryer) once or twice a year to keep them from seizing.

We thank you in advance for your patience and understanding.

The water should be on again at the end of the day.

Wanda Hogg
